Requirements Capture and Acceptance Methodology

SEA undertakes requirements engineering assignments for major civil and defence organisations. As a fundamental part of the project life-cycle, these activities range from project inception through acceptance to mid-life updates. Requirements approval, though the responsibility of customers, is facilitated by analysis and reporting of requirements databases. SEA offers expertise in a range of requirements capture tools, and including DOORS, RequisitePro and MS Access, together with experience in the MOD’s Smart Requirements Model. These high-level capabilities dovetail with the systems analysis, design skills and experience with corresponding tools, offering analysis and design to organisations wishing to develop or improve their own procedures.

Projects included:

- Sonar 2076
- Sonar 2087
- Seawolf Mid-Life Update
- CV(F)
