

Subsea Control Module

The Subsea Control Module (SCM) is a low-cost Multi-plex Electro-Hydraulic solution for subsea infrastructure mounted applications. The SCM is compact and highly-configurable, providing reliable control and monitoring of subsea valves and instrumentation.

Key Features

- Meets UK and International standards
- Compact footprint
- Installation by Fugro ImpROV ROV assisted SCM running tool
- Diver assist installation & retrieval
- Integral filtration for hydraulic supplies
- 24 of 690 Bar rated Hydraulic outputs
- Open or closed loop
- 6 of base interface electrical connections
- Depth Rating 2,000m
- Compatible with all current subsea control system fluids
